Tire Science and Technology
Index to Volume 14
1986

Number	Months	Pages
1	Jan. – March	1 – 72
2	April – June	73 – 136
3	July – Sept.	137 – 197
4	Oct. – Dec.	199 – 291

A

Acoustic radiation
A technique to predict the acoustic radiation of an automobile tire (Wright and Koopman), April – June, 102
Adhesion degradation
Loss of adhesion of cord-rubber composites in aircraft tires (Clark), Jan. – March, 33
Aging effects
Loss of adhesion of cord-rubber composites in aircraft tires (Clark), Jan. – March, 33
Aircraft tires
Loss of adhesion of cord-rubber composites in aircraft tires (Clark), Jan. – March, 33
Aspect ratio
Tire treadwear — a comprehensive evaluation of the factors: generic type, aspect ratio, tread pattern, and tread composition. Part I: Introduction and details on the organization of the program (Veith), Oct. – Dec., 219

B

Bascunana, Jose L.: Effect of some environmental and test conditions on tire treadwear indices, July – Sept., 176
Belt edge separation
A simple model for cornering and belt-edge separation in radial tires (Popper, Miller, Filkin, and Schaffers), Jan. – March, 3

C

Clark, S.K.
Loss of adhesion of cord-rubber composites in aircraft tires, Jan. – March, 33
see Tabaddor, F., Clark, S.K., Dodge, R.N., and Perraut, J.M.
Computational method
A quantitative theory for the computation of tire friction under severe conditions of sliding (Ettles), Jan. – March, 44
Contact conditions
A quantitative theory for the computation of tire friction under severe conditions of sliding (Ettles), Jan. – March, 44
Cord-rubber composites
Loss of adhesion of cord-rubber composites in aircraft tires (Clark), Jan. – March, 33
Viscoelastic loss characteristics of cord-rubber composites (Tabaddor, Clark, Dodge, and Perraut), April – June, 75
Cornering
A simple model for cornering and belt-edge separation in radial

tires (Popper, Miller, Filkin, and Schaffers), Jan. – March, 3

D

Deformation of tires
A simple model for cornering and belt-edge separation in radial tires (Popper, Miller, Filkin, and Schaffers), Jan. – March, 3
Designed experiments
Tire treadwear — a comprehensive evaluation of the factors: generic type, aspect ratio, tread pattern, and tread composition. Part I: Introduction and details on the organization of the program (Veith), Oct. – Dec., 201
Dodge, R.N.: *see* Tabaddor, F., Clark, S.K., Dodge, R.N., and Perraut, J.M.
Driving severity number
The driving severity number (DSN) — a step toward quantifying treadwear test conditions (Veith), July – Sept., 139

E

Ettles, C.M. Mc.: A quantitative theory for the computation of tire friction under severe conditions of sliding, Jan. – March, 44

F

Filkin, D.L.: *see* Popper, P., Miller, C., Filkin, D.L. and Schaffers, W.J.
Finite element
Numerical results of tire-test drum interaction (Laging and Rothert), July – Sept., 160
Numerical simulation of tire sliding events involving impacts with holes and bumps (Nakajima and Padovan), April –June, 125
On the three-dimensional computation of steel-belted tires (Rothert and Gall), April – June, 116
Friction
A quantitative theory for the computation of tire friction under severe conditions of sliding (Ettles), Jan. – March, 44
Frictional work intensity
Tire treadwear — a comprehensive evaluation of the factors: generic type, aspect ratio, tread pattern, and tread composition. Part III: Results of supplementary and UTQG treadwear test series (Veith), Oct. – Dec., 235

G

Gall. R. *see* Rothert, H. and Gall, R.

I

Impact
Numerical simulation of tire sliding events involving impacts with holes and bumps (Nakajima and Padovan), April –June, 125

K

Koopman, G.H.: *see* Wright, C. and Koopman, G.H.

L

Laging, G. and Rothert, H.: Numerical results of tire-test drum interaction, July – Sept., 160

M

Miller, C.: *see* Popper, P., Miller, C., Filkin, D.L. and Schaffers, W.J.
Modal analysis
A technique to predict the acoustic radiation characteristics of an automobile tire (Wright and Koopman), April – June, 102
Modeling of tires
A simple model for cornering and belt-edge separation in radial tires (Popper, Miller, Filkin, and Schaffers), Jan. – March, 3
Numerical results of tire-test drum interaction (Laging and Rothert), July – Sept., 160
On the three-dimensional computation of steel-belted tires (Rothert and Gall), April – June, 110
Tire-treadwear — a comprehensive evaluation of the factors: generic type, aspect ratio, tread pattern, and tread composition. Part IV: Laboratory measurement of mechanical properties and mechanical actions of tires relating to treadwear (Oblizajek and Veith), Oct. – Dec., 264

N

Nakajima, Y. and Padovan, J.: Numerical simulation of tire sliding events involving impacts with holes and bumps, April – June, 125

O

Oblizajek, K.L. and Veith, A.G.: Tire treadwear — A comprehensive evaluation of the factors: generic type, aspect ratio, tread pattern, and tread composition. Part IV: Laboratory measurement of mechanical properties and mechanical actions of tires relating to treadwear, Oct. – Dec., 264

P

Padovan, J.: *see* Nakajima, Y. and Padovan, J.
Pavement texture
A quantitative theory for the computation of tire friction under severe conditions of sliding (Ettles), Jan. – March, 44
Perraut, J.M.: *see* Tabaddor, F., Clark, S.K., Dodge, R.N., and Perraut, J.M.
Popper, P., Miller, C., Filkin, D.L., and Schaffers, W.J.: A simple model for cornering and belt-edge separation in radial tires, Jan. – March, 3

R

Rothert, H.: *see* Laging, G. and Rothert, H.
Rothert, H. and Gall, R.: On the three-dimensional computation of steel-belted tires, April – June, 116

S

Schaffers, W.J.: *see* Popper, P., Miller, C., Filkin, D.L., and Schaffers, W.J.
Sliding
A cumulative theory for the computation of tire friction under severe conditions of sliding (Ettles), Jan. – March, 44
Numerical simulation of tire sliding events involving impacts with holes and bumps (Naka-

jima and Padovan), April –June, 125

T

Temperature effects
Loss of adhesion of cord-rubber composites in aircraft tires (Clark), Jan. – March, 33
Test conditions
The driving severity number (DSN) — a step toward quantifying treadwear test conditions (Veith), July – Sept., 139
Effect of some environmental and test conditions on tire treadwear indices (Bascunana), July –Sept., 176
Tire treadwear — a comprehensive evaluation of the factors: generic type, aspect ratio, tread pattern, and tread composition. Part I: Introduction and details on the organization of the program (Veith), Oct. – Dec., 201. Part II: Results of the primary treadwear test series (Veith), Oct. – Dec., 219. Part III: Results of supplementary and UTQG treadwear test series (Veith), Oct. – Dec., 235. Part IV: Laboratory measurement of mechanical properties and mechanical actions of tires relating to treadwear (Oblizajek and Veith), Oct. – Dec., 264
Tire cord
Viscoelastic loss characteristics of cord-rubber composites (Tabaddor, Clark, Dodge, and Perraut), April – June, 75
Tire force distribution
The driving severity number (DSN) — a step toward quantifying treadwear test conditions (Veith), July – Sept., 139
Tire generic type
Tire treadwear — a comprehensive evaluation of the factors: generic type, aspect ratio, tread pattern, and tread composition. Part I: Introduction and details on the organization of the program (Veith), Oct. – Dec., 201
Tire-road interaction
Numerical results of tire-test drum interaction (Laging and Rothert), July – Sept., 160
Tire treadwear — a comprehensive evaluation of the factors: generic type, aspect ratio, tread pattern, and tread composition. Part I: Introduction and details on the organization of the program (Veith), Oct. – Dec., 210. Part IV: Laboratory measurement of mechanical properties and mechanical actions of tires relating to treadwear (Oblizajek and Veith), Oct. – Dec., 264
Tire stiffness
Tire treadwear — a comprehensive evaluation of the factors: generic type, aspect ratio, tread pattern, and tread composition. Part IV: Laboratory measurement of mechanical properties and mechanical actions of tires relating to treadwear (Oblizajek, and Veith), Oct. – Dec., 264
Tire-test drum interaction
Numerical results of tire-test drum interaction (Laging and Rothert), July – Sept., 160
Tread compound
Effect of some environmental and test conditions on tire treadwear

indices (Bascunana), July –Sept., 176
Tire treadwear — a comprehensive evaluation of the factors: generic type, aspect ratio, tread pattern, and tread composition. Part I: Introduction and details on the organization of the program (Veith), Oct. – Dec., 201. Part II: Results of the primary test series (Veith), Oct. – Dec., 219. Part III: Results of supplementary and UTQG treadwear test series (Veith), Oct. – Dec., 235
Tread pattern
Tire treadwear — a comprehensive evaluation of the factors: generic type, aspect ratio, tread pattern, and tread composition. Part I: Introduction and details on the organization of the program (Veith), Oct. – Dec., 201. Part II: Results of the primary treadwear test series (Veith), Oct. – Dec., 219
Treadwear
The driving severity number (DSN) — a step toward quantifying treadwear test conditions (Veith), July – Sept., 139
Effect of some environmental and test conditions on tire treadwear indices (Bascunana), July –Dec., 176
Tire treadwear — a comprehensive evaluation of the factors: generic type, aspect ratio, tread pattern, and tread composition. Part I: Introduction and details on the organization of the program (Veith), Oct. – Dec., 201. Part II: Results of the primary treadwear test series (Veith), Oct. – Dec., 219. Part III: Results of supplementary and UTQG treadwear test series (Veith), Oct. – Dec., 235. Part IV: Laboratory measurement of mechanical properties and mechanical actions of tires relating to treadwear (Oblizajek and Veith), Oct. – Dec., 264

V

Veith, A.G.
The driving severity number (DSN) — a step toward quantifying treadwear test conditions, July – Sept., 139
Tire treadwear — a comprehensive evaluation of the factors: generic type, aspect ratio, tread pattern, and tread composition. Part I: Introduction and details on the organization of the program, Oct. – Dec., 201. Part II: Results of the primary treadwear test series, Oct. – Dec., 219. Part III: Results of supplementary and UTQG treadwear test series, Oct. – Dec., 235
see Oblizajek, K.L. and Veith, A.G.
Viscoelasticity
Viscoelastic loss characteristics of cord-rubber composites (Tabaddor, Clark, Dodge, and Perraut), April – June, 75

W

Wright, C. and Koopmann, G.H.: A technique to predict the acoustic radiation characteristics of an automobile tire, April – June, 102
